Answers: Enterprise-Level MCQ Quiz - Visualization & Publishing

Q1

A. Increasing visual density

B. Using DirectQuery for all datasets

C. Minimizing visual interactions and optimizing data models

D. Adding multiple slicers for flexibility

Correct Answer: C

Q2

A. Publishing to public web

B. Sharing PBIX files via email

C. Using Power BI Service with Row-Level Security (RLS)

D. Exporting reports to PDF

Correct Answer: C

Q3

A. Faster dashboard rendering only

B. Unified data platform with real-time analytics and Lakehouse integration

C. Reduced licensing cost

D. Eliminates need for ETL tools

Correct Answer: B

Q4

A. Import Mode

B. Scheduled Refresh / Real-time streaming datasets

C. Static dashboards

D. Dataflows

Correct Answer: B

Q5

A. It increases data redundancy

B. It simplifies relationships and improves query performance

C. It eliminates need for DAX

D. It allows unlimited joins

Correct Answer: B

Q6

A. Include all available metrics

B. Use highly detailed tables

C. Focus on KPIs, trends, and minimalistic design

D. Avoid visual hierarchy

Correct Answer: C

Q7

A. Power BI Desktop

B. Power BI Embedded

C. Dataflows

D. Paginated Reports

Correct Answer: B

Q8

A. Single workspace for all reports

B. Separate workspaces with role-based access

C. Local storage only

D. Personal workspaces

Correct Answer: B

Q9

A. Data Activator

B. OneLake

C. Power Automate

D. Azure Functions

Correct Answer: B

Q10

A. To automate data ingestion

B. To manage report lifecycle across Dev, Test, and Prod environments

C. To improve visualization design

D. To create dashboards automatically

Correct Answer: B

Q11

A. Pie chart

B. Line chart

C. Table

D. Card

Correct Answer: B

Q12

A. Only supports import mode

B. Combines DirectQuery and Import for flexibility

C. Removes need for relationships

D. Disables DAX

Correct Answer: B

Q13

A. Manual formatting per report

B. Power BI Themes

C. Export templates

D. Dataflows

Correct Answer: B

Q14

A. Load all data into memory

B. Use aggregations and incremental refresh

C. Avoid indexing

D. Use Excel as backend

Correct Answer: B

Q15

A. To increase report complexity

B. To control access, ensure compliance, and maintain data quality

C. To reduce user access

D. To eliminate dashboards

Correct Answer: B

Q16

A. Drill-through

B. Slicers

C. Bookmarks

D. Tooltips

Correct Answer: B

Q17

A. Data storage

B. Triggering actions based on real-time data events

C. Creating dashboards

D. Running SQL queries

Correct Answer: B

Q18

A. Complex DAX expressions

B. Technical naming conventions

C. Clear labels, tooltips, and intuitive visuals

D. Multiple hidden filters

Correct Answer: C

Q19

A. Editing reports

B. Automatically delivering reports via email

C. Creating dashboards

D. Managing datasets

Correct Answer: B

Q20

A. Hardcoding logic in visuals

B. Centralized semantic models and reusable datasets

C. Using only Excel files

D. Avoiding cloud services

Correct Answer: B
