📘 Quiz: Document Intelligence & AI Search (Azure) – Answer Key

Q1. What is Azure Document Intelligence primarily used for?

A. Data storage

B. Document processing and extraction

C. Web hosting

D. Network security

Answer: B

Q2. Which feature allows extracting structured data from invoices and forms?

A. Blob Storage

B. Form Recognizer

C. Azure Functions

D. Virtual Machines

Answer: B

Q3. What type of AI model is used in document intelligence?

A. Reinforcement learning

B. Computer Vision + NLP

C. Clustering

D. Regression

Answer: B

Q4. Prebuilt models in Azure Document Intelligence are used for:

A. Only images

B. Only PDFs

C. Specific document types like invoices and receipts

D. Gaming

Answer: C

Q5. Custom models are useful when:

A. Data is already structured

B. Documents follow unique formats

C. No data is available

D. Only text is needed

Answer: B

Q6. Which input formats are supported?

A. PDF

B. JPEG

C. PNG

D. All of the above

Answer: D

Q7. OCR stands for:

A. Object Control Recognition

B. Optical Character Recognition

C. Online Content Rendering

D. Output Control Resource

Answer: B

Q8. Which Azure service is closely integrated with Document Intelligence for storage?

A. Azure DevOps

B. Azure Blob Storage

C. Azure Kubernetes Service

D. Azure Firewall

Answer: B

Q9. Key-value pair extraction is useful for:

A. Video streaming

B. Structured form data extraction

C. Gaming

D. Networking

Answer: B

Q10. Which of the following best describes layout analysis?

A. Detecting colors

B. Identifying document structure (tables, paragraphs)

C. Running ML models

D. Encrypting files

Answer: B

Q11. Document processing pipelines typically include:

A. Data ingestion → Processing → Output

B. Only storage

C. Only visualization

D. Only networking

Answer: A

Q12. What is the role of data labeling in custom model training?

A. Data deletion

B. Providing examples for model learning

C. Encrypting data

D. Compressing files

Answer: B

Q13. Structured data refers to:

A. Random text

B. Organized data with defined fields

C. Images only

D. Audio files

Answer: B

Q14. Semi-structured data includes:

A. Tables and forms

B. Only videos

C. Only audio

D. Only code

Answer: A

Q15. Automation in document processing helps to:

A. Increase manual work

B. Reduce efficiency

C. Improve speed and accuracy

D. Delete data

Answer: C

Q16. What is Azure AI Search used for?

A. Hosting websites

B. Searching and indexing data

C. Managing networks

D. Running VMs

Answer: B

Q17. A search index is:

A. A database backup

B. A structured collection of searchable data

C. A virtual machine

D. A firewall

Answer: B

Q18. What is the role of an indexer?

A. Deletes data

B. Pulls data from sources into the index

C. Encrypts data

D. Displays UI

Answer: B

Q19. Data sources for Azure AI Search can include:

A. Azure Blob Storage

B. SQL Database

C. Cosmos DB

D. All of the above

Answer: D

Q20. What is a skillset in Azure AI Search?

A. UI design

B. AI enrichment pipeline

C. Storage system

D. Network configuration

Answer: B

Q21. What is indexing?

A. Deleting files

B. Organizing data for fast search

C. Encrypting data

D. Compressing data

Answer: B

Q22. Semantic search focuses on:

A. Exact keyword matching

B. Understanding meaning and intent

C. Only images

D. Only numbers

Answer: B

Q23. Which feature improves search relevance?

A. Ranking algorithms

B. Data deletion

C. Storage size

D. Bandwidth

Answer: A

Q24. What is full-text search?

A. Searching only titles

B. Searching entire document content

C. Searching images only

D. Searching metadata only

Answer: B

Q25. Which technique helps in better query understanding?

A. Synonyms

B. Encryption

C. Compression

D. Backup

Answer: A
