📝 Power BI Quiz – Advanced DAX

🔹 Section A: MCQs (1 mark each)

1. What is the main purpose of the CALCULATE function?
Answer: B

A. Create columns
B. Modify filter context
C. Load data
D. Create visuals

---

2. Which function is used to apply conditions inside CALCULATE?
Answer: C

A. SUM
B. COUNT
C. FILTER
D. IF

---

3. Time intelligence functions require:
Answer: B

A. Only fact table
B. Date table
C. Customer table
D. Product table

---

4. Which function calculates Year-to-Date values?
Answer: C

A. SUM
B. FILTER
C. TOTALYTD
D. COUNT

---

5. What does FILTER function return?
Answer: B

A. A number
B. A table
C. A chart
D. A column

---

6. CALCULATE function can:
Answer: B

A. Delete data
B. Change filters
C. Create visuals
D. Format tables

---

7. Which is correct syntax of CALCULATE?
Answer: B

A. CALCULATE(value)
B. CALCULATE(expression, filters)
C. CALCULATE(table, column)
D. CALCULATE(sum, avg)

---

8. What happens if Date table is not connected?
Answer: B

A. Faster calculation
B. Time intelligence won’t work
C. Data deleted
D. Charts disappear

---

9. FILTER is mainly used for:
Answer: B

A. Sorting
B. Conditional filtering
C. Aggregation
D. Grouping

---

10. YTD calculation depends on:
Answer: C

A. Region
B. Category
C. Date column
D. Customer

🔹 Section B: True/False (1 mark each)

11. CALCULATE changes filter context.
Answer: True

(True / False)

---

12. FILTER returns a single value.
Answer: False

(True / False)

---

13. TOTALYTD works without a Date table.
Answer: False

(True / False)

---

14. CALCULATE can override existing filters.
Answer: True

(True / False)

---

15. Time intelligence functions require date hierarchy.
Answer: True

(True / False)

🔹 Section C: Short Answer (2 marks each)

16. What does CALCULATE function do?
Answer: CALCULATE modifies the filter context and evaluates an expression.

---

17. What is FILTER function?
Answer: FILTER returns a table after applying conditions.

---

18. What is Time Intelligence?
Answer: Time Intelligence performs date-based calculations like YTD, MTD.

---

19. Why is Date table required?
Answer: Date table is required for proper time-based calculations.

---

20. What is YTD calculation?
Answer: YTD calculates cumulative values from start of year to current date.

🔹 Section D: Scenario-Based Questions (3 marks each)

21. Scenario:
Answer: CALCULATE with filter

You want revenue only for North region.
👉 Which function will you use?

---

22. Scenario:
Answer: FILTER

You want to filter sales where revenue > 2000.
👉 Which function will you use?

---

23. Scenario:
Answer: TOTALYTD

You want cumulative sales from start of year.
👉 Which function will you use?

---

24. Scenario:
Answer: Missing or unlinked Date table

Your YTD calculation is not working.
👉 What could be the reason?

---

25. Scenario:
Answer: CALCULATE

You want to change filter inside a measure.
👉 Which function is used?

🔹 Section E: Practical Thinking (5 marks)

26. Task:
Answer:
1. CALCULATE(SUM(Sales[Revenue]), Region="North")
2. CALCULATE(SUM(Sales[Revenue]), FILTER(Sales, Sales[Revenue]>2000))
3. TOTALYTD(SUM(Sales[Revenue]), Date[Date])

Write DAX formulas for:

1. Revenue for North region
2. High revenue sales (>2000)
3. YTD Sales
-
