

Enterprise Scenario-Based MCQs – Answers

1. A banking organization wants separate AI agents for fraud detection, compliance verification, and report generation. Which CrewAI concept best supports this architecture?

- A. Single Prompt Chaining
- B. Role-Based Agent Design
- C. Static Workflow Execution
- D. Token Compression

Answer = B

2. In a CrewAI application, the Research Agent gathers market data and passes it to the Writer Agent automatically. Which feature enables this?

- A. Memory Persistence
- B. Context Chaining
- C. Delegation Callback
- D. Batch Execution

Answer = B

3. A healthcare company wants an AI manager agent to dynamically assign tasks depending on patient report complexity. Which CrewAI process is most suitable?

- A. Sequential Process
- B. Batch Process
- C. Hierarchical Process
- D. Recursive Process

Answer = C

4. A finance company wants AI agents to remember previous investment analyses across multiple executions. Which CrewAI feature should be enabled?

- A. Verbose Mode
- B. Delegation Mode
- C. Memory
- D. Output File

Answer = C

5. An enterprise AI system uses Agent 1 → Data Collection, Agent 2 → Data Cleaning, Agent 3 → Report Generation. Which orchestration model does this represent?

- A. Sequential Workflow
- B. Autonomous Swarm
- C. Parallel Inference
- D. Reactive Pipeline

Answer = A

6. A logistics company wants AI agents to search shipment databases and calculate delivery risks. What CrewAI capability enables this?

- A. Prompt Injection
- B. Agent Personas
- C. Tool Integration
- D. Vector Compression

Answer = C

7. In CrewAI, what is the primary purpose of an Agent's "backstory"?

- A. Store API keys
- B. Improve database speed
- C. Shape LLM behavior and expertise
- D. Reduce token usage

Answer = C

8. A company wants a custom Python function to calculate insurance risk scores and allow AI agents to use it directly. What CrewAI feature should be used?

- A. Agent Memory
- B. @tool Decorator
- C. kickoff_async()
- D. Contextual Search

Answer = B

9. A cybersecurity firm needs AI agents to monitor threats, analyze logs, generate alerts, and escalate risks dynamically. Which process model is ideal?

- A. Sequential
- B. Hierarchical
- C. Manual Triggering
- D. Fixed Context

Answer = B

10. Which CrewAI component defines: "What work should be done and expected output format"?

- A. Agent
- B. Crew
- C. Task
- D. Tool

Answer = C

11. An AI content company wants agents to independently improve outputs by delegating work among themselves. Which Agent setting enables this?

- A. verbose=True

B. memory=True

C. allow_delegation=True

D. max_rpm=5

Answer = C

12. A retail enterprise wants an AI workflow that is predictable, easy to debug, step-by-step. Which CrewAI process should they choose first?

A. Hierarchical

B. Sequential

C. Autonomous

D. Recursive

Answer = B

13. Which built-in CrewAI tool is most suitable for reading CSV-based sales reports?

A. ScrapeWebsiteTool

B. SerperDevTool

C. CSVSearchTool

D. YoutubeSearchTool

Answer = C

14. A pharmaceutical company wants AI agents to create a strategy before execution begins to reduce hallucinations. Which feature should be enabled?

A. Planning Mode

B. Delegation Mode

C. Verbose Logging

D. Batch Inference

Answer = A

15. A company uses one AI agent for research and another for content writing. Why is this architecture generally better than using a single agent?

- A. It reduces electricity consumption
- B. Specialized agents improve task quality
- C. It removes the need for prompts
- D. It eliminates APIs

Answer = B

16. Which statement best describes CrewAI?

- A. A database optimization framework
- B. A framework for role-based AI collaboration
- C. A frontend web development library
- D. A cloud storage engine

Answer = B

17. A legal-tech startup wants AI agents to review contracts, identify risky clauses, and generate summaries automatically. This is an example of:

- A. Enterprise Multi-Agent Workflow
- B. Static Machine Learning
- C. Supervised Classification Only
- D. Traditional RPA

Answer = A

18. In CrewAI, which component combines agents and tasks into a working AI system?

- A. Context
- B. Callback
- C. Crew
- D. Prompt

Answer = C

19. A media company wants to run the same AI workflow for multiple topics such as AI, Blockchain, and Cybersecurity simultaneously. Which CrewAI feature helps achieve this?

- A. `kickoff_for_each()`
- B. `FileReadTool`
- C. Verbose Mode
- D. Contextual Memory

Answer = A

20. Which framework is generally considered most suitable for highly controlled stateful workflows?

- A. CrewAI
- B. AutoGen
- C. LangGraph
- D. TensorFlow

Answer = C
